Avoid Algae Blooms on Black Lake in St. Lawrence County

Canton, NY — The St. Lawrence County Public Health Department has issued a Blue-green Algae Advisory for Black Lake. This Advisory was issued because a blue-green algae bloom has been confirmed visually in various areas of Black Lake. People and animals should avoid contact with any harmful algae blooms (HAB), scums and colored water.

Shoreline observations confirm a cyanobacteria HAB in Black Lake (St Lawrence County) in at least three different locations, primarily along the Western Shoreline. The size of the bloom is considered prevalent and may be Widespread/Lakewide.

Blue-green algal blooms can turn the water green and can form thick scums on the water surface. Blue-green algae can cause skin or eye irritation, or diarrhea and vomiting if ingested. People and animals should keep out of the water where blooms are present and should rinse off with clean water if contact occurs.

The Public Health Department recommends taking the following precautions:

- Don't swim, wade or fish near blooms or scums
- Don't drink the water
- Keep children and animals away from any blooms or scums
- Rinse with clean water if exposed

Please report symptoms that may be associated with exposure to blue-green algae blooms, such as skin or eye irritation, or diarrhea and vomiting to your primary care provider.
